

instruNet version  $\geq 1.4$  includes a Windows program called "VB Instrument" that implements a strip chart/oscilloscope recorder for 1 to 16 channels. It is similar to instruNet World, yet is written in Visual Basic and the source code is included with instruNet. You are welcome to modify it. To run VB Instrument, please proceed with the following steps:

- \* Exit any currently running instruNet software and select under the Windows START menu: Programs / instruNet / Application Software / VB Applications / VB Instrument.exe.
- \* Press the Channels button, select 4 channels for digitizing (i.e. click in small rectangle after channel address, it will turn red), and close the instruNet Network window.
- \* Press the Start button and watch the data appear in the window.
- \* To learn more, please press the Help button.
- \* Close the VB Instrument program by clicking in the upper right corner.
