Working with VB Scope

instruNet version >= 1.4 includes a Windows program called "VB Scope" that implements a 2 channel strip chart recorder / oscilloscope, XY Record, and Spectrum Analyzer. It is written in Visual Basic, the source code is included with instruNet, and you are welcome to modify it. To run VB Scope, please proceed with the following steps:

* Exit any currently running instruNet software and select under the Windows START menu: Programs / instruNet / Application Software / VB Applications / VB Scope.exe.

* Press the Start button and watch the data appear in the window. Ch1 and Ch2 timewaves are shown in the left-most display, the frequency spectrum of Ch1 is shown in the upper-right display, and an XY plot of Ch1 and Ch4 are shown in the lower-right display.

* To learn more, please press the Help button.

* Close the VB Scope program by clicking in the upper right corner.
